LETTER OF TRANSMITTAL.

THE PANAMA CANAL,
CANAL ZONE HEALTH DEPARTMENT,
Balboa Heights, Canal Zone, December 9, 1916.

Lieut. Col. CHESTER HARDING,
*Acting Governor, The Panama Canal,
Balboa Heights, Canal Zone.*

SIR: I have the honor to submit the following report of the operations of the department of health for the month of November, 1916.
Very respectfully,

D. C. HOWARD.
Chief Health Officer

GENERAL REMARKS.

The general health of employees and nonemployees in the Canal Zone and terminal cities has continued good.

A case of smallpox was admitted to Ancon Hospital on November 2, 1916, from Panama City, in a West Indian sailor who was discharged from the British steamship *Coya* on October 18, 1916. The disease was contracted before his arrival on the Isthmus. This ship had called at Peruvian ports on her trip north, and took an original bill of health at Salaverry, Peru; she sailed from that port on October 11, 1916; called at Eten, Peru, and sailed on October 13, 1916. The patient was isolated in Ancon Hospital and is now convalescent. All known contacts were immediately vaccinated and isolated, and other usual precautions taken. The adult contacts had been protected by vaccination, but there were three young children contacts who had never been vaccinated. The first vaccinations were unsuccessful. On November 21 the second case appeared in a child "contact"—daughter of the first patient admitted. On November 23, a third case appeared in an infant "contact," living in an adjoining room of the same house. No further cases have developed. Of the three cases treated in Ancon Hospital, the first two are now convalescent, and the third (6 weeks old infant) died November 30. Previous to the above the last case of this disease brought to the Isthmus was in February, 1915; the last case originating on the Isthmus was in 1907.

The annual physical examination of gold employees was commenced during the month. This year these examinations have been made by a permanent personnel of physicians, clerks, and attendants detailed for that purpose, and proceeding from one station to another as the work requires. Formerly the examinations were made by the district physicians in connection with their

regular duties. The present plan is resulting in more uniformity in the examination and is being accomplished more rapidly and with less inconvenience to the employees concerned.

No diseases of a quarantinable nature, other than the smallpox cases mentioned above, originated on or were brought to the Isthmus during the month.

VITAL STATISTICS.

The following statistics are based upon the number of names appearing on the rolls for the preceding month, which was 35,031.

The total number of admissions to hospitals and quarters was 922, a rate of 315.83,¹ as compared with 282.76 for the preceding month, and 311.01 for the corresponding month of last year.

The total number of deaths from all causes was 13; of these, 9 were from disease, giving a death rate of 3.08, as compared with 5.77 for the preceding month and 5.96 for the corresponding month of last year.

The constantly noneffective rate was 8, as compared with 8.16 for the preceding month and 9.79 for the corresponding period of last year.

The total admission rate for malaria, hospitals and quarters, was 5.48, as compared with 13.71 for the preceding month, and 22.09 for the corresponding month of last year. The constantly noneffective rate for malaria was 0.24, as compared with 0.50 for last month and 0.70 for the month of November last year.

The diseases causing the highest admission rates to hospital, in the order of their numerical importance, were: (1) Venereal diseases, (2) malaria, (3) tuberculosis, (4) bronchitis, and (5) pleurisy. These five diseases caused 22 per cent of all admissions to hospitals. Eight and one-half per cent of all admissions to hospitals were caused by venereal diseases; malaria causing 4 per cent of all admissions.

There were two admissions for typhoid fever during the month, giving an admission rate of 0.68, as compared with 0.72 for the preceding month. There were no admissions for typhoid during November, 1915.

EFFECTS OF RACE.

The admission rate to hospital, and the death rate from disease, for black employees, were 65.68 and 3.56, respectively, as compared with 66.82 and 5.84 for the preceding month and 133.23 and 6.88 for the corresponding month of last year. For white employees the admission rate to hospital and the death rate from disease were 250.05 and 0.00, respectively, as compared with 359.63 and 5.29 for the preceding month, and 365.77 and 0.00 for the corresponding month of last year.

The constantly noneffective rates were 6.53 for blacks and 17.43 for whites.

The admission rate to hospital and quarters for malaria was 5.14 for blacks and 7.65 for whites, as compared with a rate of 7.93 for

¹ All morbidity and mortality rates are computed as equivalent annual per 1,000.

blacks and 47.40 for whites for last month, and 17.41 for blacks and 52.25 for whites for the corresponding month of last year.

There was one death among American employees during the month, giving a rate of 2.84, as compared with 2.85 for last month, and 5.82 for the month of November of last year.

DEPORTATIONS.

There were seven deportations accomplished during the month, five employees (for injury 1, for disease 4) and two nonemployees.

CANAL ZONE.

EMPLOYEES AND NONEMPLOYEES.

The population of the Canal Zone, according to the last police census taken in June, 1916, is 31,048. This includes employees, nonemployees, and military garrisons residing or stationed within the Canal Zone. Among this population there were 24 deaths during the month of November, 20 of which were from disease, giving a death rate of 7.73, as compared with 9.66 for the preceding month and 11.14 for the corresponding month of last year.

Of the total deaths from disease the percentage under 5 years of age was 20, as compared with 32 for last month.

There were 54 births reported, giving a rate of 20.87; of these 14 were white and 40 colored.

There were three deaths of children under 1 year of age, all colored, giving an infant mortality rate, based upon the number of births reported for the month, of 0 for white and 75 for colored children, with a general average of 56.

The percentage of stillbirths to total births was 7.

PANAMA CITY.

EMPLOYEES AND NONEMPLOYEES.

The population of the city is 60,778, among whom there were 182 deaths during the month of November; of these 176 deaths were from disease, giving a rate of 34.75, as compared with 29.62 for the preceding month and 27.63 for the corresponding month of last year.

Of the total deaths from disease the percentage under 5 years of age was 52, as against 47 for last month.

The principal causes of death as compared with last month were as follows:

	October.	Novem-ber.
Tuberculosis (various organs).....	31	28
Diarrhea and enteritis (under 2 years).....	26	24
Broncho-pneumonia.....	16	17

There were 220 births reported, giving a rate of 43.44. There were 75 deaths under 1 year of age, giving an infant mortality rate based on the number of births reported for the month of 345.

The percentage of stillbirths to total births was 8.

COLON.

EMPLOYEES AND NONEMPLOYEES.

The population of the city is 24,693, among whom there were 53 deaths during the month of November; of these 52 deaths were from disease, giving a rate of 25.27, as compared with 30.13 for the preceding month and 20.87 for the corresponding month of last year.

Of the total deaths from disease the percentage under 5 years of age was 43, as compared with 43 for the preceding month.

The principal causes of death as compared with last month were as follows:

	October.	November.
Broncho-pneumonia.....	12	7
Chronic nephritis.....	7	7
Tuberculosis (various organs).....	10	5

There were 73 births reported, giving a rate of 35.48. There were 16 deaths under 1 year of age, giving an infant mortality rate, based on the number of births reported for the month, of 219.

The percentage of stillbirths to total births was 6.

DIVISION OF HOSPITALS.

ANCON HOSPITAL.

The average number of patients constantly in the hospital proper during the month was 423, as compared with 416 for the preceding month, and 458 for the corresponding period of last year. The average number of days treatment per employee was 19.98. The daily per capita cost per patient for October was \$1.64 gross.

Thirty-six cases of malaria were admitted against 52 for October, 62 for September, 124 for August, and 143 for July. Seven deaths occurred from tuberculosis against 5 in October and 13 in September.

Detailed statistics are shown in Table XIII.

Board of health laboratory.—The usual routine work has been continued during the month. Two deaths in cattle from the Corozal farm were found to be due to Texas cattle fever, as a result of laboratory examinations. This is the first record of this disease on the Isthmus, so far as known.

Corozal Hospital.—The average number of insane patients constantly cared for during November was 315, as compared with 310 for last month and 254 for the corresponding month of last year.

During the month there were 21 admissions, 7 deaths, 11 discharges, and no transfers. The daily per capita cost for October was \$0.49 gross.

Detailed statistics are shown in Table XIII.

Chronic ward.—During the month there were 10 admissions, no deaths, and 3 discharges. The average number of patients constantly cared for was 21.77. The daily per capita cost for October was \$0.36.

COLON HOSPITAL.

The average number of patients constantly in hospital was 43, as compared with 38 for the preceding month and 23 for the corresponding month of last year. The average number of days' treatment per employee was 9.25. The daily per capita cost per patient for October was \$2.27 gross.

Detailed statistics are shown in Table XIV.

PALO SECO LEPER ASYLUM.

The average number of patients constantly cared for during the month was 68.56, as compared with 67.67 for the preceding month and 57.40 for the corresponding month of last year. During November there was one admission and no deaths or discharges. The daily per capita cost per patient for October was \$0.75 gross.

Detailed statistics are shown in Table XV.

SANTO TOMAS HOSPITAL.

One thousand three hundred and seventy-one patients were treated in the hospital during the month of November as compared with 1,414 for the preceding month and 1,388 for the corresponding month last year. The daily average number of patients treated was 450, as compared with 440 for last month and 453 for the month of November last year. The total number of days treatment was 13,340 as compared with 13,657 for last month.

The number of deaths was 97, with tuberculosis of the lungs, diarrhea, and enteritis (under 2 years), and congenital debility the chief causes in the order named.

Twelve cases of dysentery were treated during the month, with no deaths; 10 cases of pneumonia, with 1 death. There were no admissions for typhoid fever during the month.

Detailed statistics are shown in Table XVI.

DISTRICT DISPENSARIES.

The dispensary having the highest admission rate for malaria was Gatun with an average weekly percentage of 0.11. There were no admissions for malaria among the employees of the Culebra-Empire district during the month.

Detailed statistics are shown in Table IX.

ZONE SANITATION.

CANAL.

The energies of this division are directed chiefly toward the control of malarial fever, which has been responsible for the non-effective rate among employees to a greater extent than any other disease. The work has been so far successful that—as noted elsewhere in this report—there are now occasional months during which malaria takes second or third place in the list of causes for admissions to sick report. The extermination of malarial fever in a given district is best accomplished by the elimination of mosquitoes, and this is effected in a large measure by destruction of mosquito larvæ. During November the residence districts have been almost free from mosquitoes, due to the fact that the usual measures employed by this division were supplemented by the very heavy rains, which flush out the streams, pools, and various other breeding places, destroying the larvæ. A few mosquitoes are present at all times in all districts and the search for their breeding places by the district inspectors is based on the reports from the board of health laboratory as to the kinds of mosquitoes present. These reports indicate that we have present certain kinds, the larvæ of which are not destroyed by oiling the surface of the breeding places (thus preventing them from obtaining oxygen) and which are not vulnerable to any of our present modes of attack.

A recent and very comprehensive publication on mosquitoes (*The Mosquitoes of North and Central America and the West Indies*, by Howard, Dyar & Knab), referring to the habits of the larvæ, says, "Some, indeed, never rise to the surface and obtain the necessary oxygen from the water by osmosis, or in the case of *Mansonia*, from the vascular roots of aquatic plants." Fortunately, these species which are not reached by the usual methods directed toward the elimination of mosquitoes, have not been incriminated as carriers of disease, but they are annoying and, for this department, they complicate the problem of the absolute elimination of the mosquito.

There have been no epidemics on the Zone during the month, but sporadic cases of communicable diseases have been reported as follows:

Chickenpox.....	5	Measles.....	12
Diarrhea.....	2	Tuberculosis (various organs).....	7
Diphtheria.....	4	Typhoid fever.....	1
Malarial fever.....	26		

PANAMA.

For the month Santo Tomas Hospital reported 16 admissions for malaria and Ancon Hospital 6 admissions, making a total of 22 cases. Compared with the corresponding month of 1915 there were 20 cases chargeable to Panama and in November, 1914, 167 cases.

There have been 4 cases of diphtheria reported during the month with 1 death. The same routine was employed as heretofore, including hospitalization of cases, the taking of throat cultures from all contacts, their restriction for 10 days following exposure, etc.

Two cases of typhoid fever were reported during the month with no deaths. Both cases were in West Indians residing in the section of the city known as Guachapali, but no connection could be traced between them. In both cases the source of infection was undetermined.

A bureau of child hygiene was inaugurated under the direction of this office during the month. One registered nurse was assigned to the work and Santo Tomas Hospital was made a central headquarters for the time being. The plan is to take a certain number of infants from birth and by instruction of the mothers as to proper feeding, bathing, clothing, and general care trace them for an indeterminate period. Visits are made to homes and one afternoon per week an opportunity for consulting a hospital physician is afforded. The goal sought is the lowering of the infant mortality rate in this city which has for years been excessive.

The following is taken from the report of the registered nurse in charge:

From the 11th, when the work commenced, to the end of the month 61 babies' histories were taken and appropriate instruction covering feeding, care of mouth, eyes, and general hygiene was given to the mothers who in the main evinced considerable interest. The first four days the attending nurse worked exclusively at the station (Santo Tomas Hospital) but beginning on November 15 she began visits in the city in the follow-up campaign and from then until November 30, 37 babies were visited in their homes. On the weekly day for physician's inspection, 17 babies were brought in; 2 it was deemed necessary to treat. Two infants who were being artificially milk fed were returned to the breast. Although in its beginning, the future outlook in this work is encouraging.

The following communicable diseases were reported during the month:

Beri-beri.....	3	Smallpox.....	3
Chickenpox.....	4	Syphilis.....	7
Diphtheria.....	4	Scarlet fever.....	1
Dysentery.....	2	Typhoid.....	2
Malaria.....	22	Tuberculosis.....	28
Measles.....	9	Tetanus.....	2
Meningitis.....	3	Whooping cough.....	3
Pellagra.....	1		

COLON.

The activities of the health department have been along the usual lines during the month. Good progress has been made in the permanent antimosquito work that has been under way in the Cristobal and Mount Hope districts. Several large swamp areas have been filled and the drainage facilities improved by laying tile and cementing ditches.

The following notifiable diseases were reported during the month:

Chickenpox.....	1	Measles.....	1
Malaria.....	10	Pneumonia.....	1
Diphtheria.....	2	Whooping cough.....	3
Tuberculosis.....	5	Yaws.....	1

QUARANTINE SERVICE.

The quarantine transactions during the month on the Atlantic side were conducted without special incident, and no special changes have been noted in conditions on the Atlantic side in South America and West Indian Islands. No further reports of yellow fever at Barbados have been received since the report of six cases occurring in September.

Quarantine conditions along the west coast of South America show little change except in Guayaquil, Ecuador, where the usual seasonal increase in both the yellow fever and plague is now manifesting itself. No cases of yellow fever have been reported at Buenaventura, Colombia, for some months, and the reports of the inspectors on the steamship *Jamaica* and the steamship *Balboa* would indicate that no cases actually exist at the present time in this port, although sanitary conditions are such that its reappearance at any time could not be considered as unlooked for. One case of bubonic plague was reported in a white sailor on the steamship *Santa Rita*, the infection in this case evidently having been received in the small port of Caldera, Chile. This man was removed to the Lazareto, in Callao, Peru, where the case terminated fatally. Smallpox is reported as being more than usually prevalent along the coast of Peru and Ecuador.

Supervision has been maintained over the inspection of animals at the abattoir at Cristobal during the month, and condemnations of meat made in accordance with the Federal Meat Inspection regulations. Quarantine inspection of 718 cattle was made, of which 156 were local inspections for shipments across the Panama Railroad. Quarantine inspections at the Cristobal abattoir were made on 1,023 cattle and 2 sheep; the routine procedure of inspection at the abattoir includes the microscopic examination of splenic smears. Anthrax occurred on pastures 59, 56, and 35 during the month of this report. The total number of deaths on these pastures was 13. One animal from pasture lower 59 died in the car at the abattoir. No deaths have occurred since the 22d of the month. The outbreak of anthrax referred to, occurring between November 11 and 22, was apparently caused by overcrowding of pastures 35, 56, and 59. This situation has been relieved.

TABLE XVII.—SUMMARY OF SANITARY WORK PERFORMED AND MATERIAL EXPENDED DURING THE MONTH OF NOVEMBER IN THE CANAL ZONE.

Work requests on supply department:	
Grass cutting.....	40
Screening.....	11
Miscellaneous.....	8
Work requests on municipal engineering department.....	13
Buildings inspected:	
For screening.....	1,622
For mosquitoes.....	5,237
For general sanitation.....	2,235
Stores, inspections of.....	24
Restaurants, inspections of.....	12
Shops, inspections of.....	76
Notices served to abate nuisances.....	2
Houses disinfected and fumigated.....	4
Pit closets inspected.....	582
Closets disinfected.....	665
Garbage cans emptied.....	2,852
Rat traps in use.....	400
Rats destroyed.....	489
Number of mosquitoes destroyed in dwellings:	
Anopheles.....	919
Stegomyia.....	40
Culex.....	1,696
Mansonia.....	12,498
Material expended:	
Larvacide, gallons.....	544
Crude oil, gallons.....	12,872
Kerosene, gallons.....	633
Number of containers with stegomyia larvæ found.....	1
Fly breeding places destroyed.....	5

REPORT OF ROUTINE WORK DONE BY HEALTH OFFICE, PANAMA.

General sanitation:	
Linear feet of ditches cleaned and maintained.....	74,400
Linear feet of new ditches dug.....	115
Number of cubic yards of earth used in filling.....	0
Gallons of larvacide used.....	935
Gallons of crude oil used.....	6,040
Gallons of kerosene used.....	173
Square yards of pools oiled.....	471,940
Water containers treated.....	10,685
Mosquito breeding places found (Stegomyia 128).....	329
Fly breeding places found.....	54
Flies trapped (13,000 per quart).....	100
Number of rats killed.....	927
Number of room disinfections made.....	25
Square feet of vegetation removed.....	331,900
Garbage collection:	
Number of loads of garbage removed to dump.....	4,375
Number of cubic yards of garbage removed to dump.....	9,366
Total number of cans of garbage emptied.....	42,701
Buildings:	
Number of buildings inspected.....	4,504
Number of plans for new buildings approved.....	13
Number of permits issued for repairs to old buildings.....	67
Total building permits issued.....	80
Number of buildings condemned.....	10
Number of stables condemned.....	0
Number of buildings demolished.....	10
Street cleaning:	
Average number of square yards of streets cleaned daily.....	600,000
Average number of square yards of streets sprinkled daily.....	0
Number of private properties cleaned during month.....	7
Number of nuisance notices served and nuisances abated.....	300
Vaccinations:	
Number of vaccinations performed during month.....	188
Total number of vaccinations since Apr. 1, 1914.....	25,068

MONTHLY WORK REPORT FOR COLON-CRISTOBAL, AND MOUNT HOPE.

Sanitation, Colon-Cristobal:	
Square yards street cleaned.....	3, 745, 848
Square yards alleys maintained.....	624, 000
Number of private properties cleaned.....	738
Cubic feet fumigated.....	6, 272
Doses of quinine issued.....	6, 435

Number of fly-breeding places destroyed.....	0
Gallons of larvacide used.....	3
Gallons of crude oil used.....	225
Number of buildings inspected.....	1, 330
Number of nuisances abated.....	39
Sanitation, Mount Hope:	
Number of cans garbage (cubic yards 102).....	780
Square yards oiled.....	124, 000
Number of doses of quinine issued.....	674
Number of receptacles treated.....	12, 150
Number of mosquito places destroyed.....	94
Number of mosquitoes caught—	
Anopheles—	
Barracks.....	20
Mount Hope village.....	30
Total anopheles.....	50

Sanitation, Mount Hope—Continued.
 Number of mosquitos caught—Continued.

Culex—	
Barracks.....	3, 190
Silver married quarters.....	1, 572
Steamship.....	1
Mount Hope village.....	225
Camp Beird cars.....	131
Total culex.....	5, 119
Gallons of larvacide used.....	50
Gallons of crude oil used.....	3, 109. 9
Mount Hope cemetery maintained.....	
Linear yards ditches constructed.....	0
Linear yards ditches maintained.....	9, 650
Square yards of vegetation removed.....	125, 200
Number of burials during the month.....	40

TABLE XVIII.—CONSOLIDATED REPORT OF QUARANTINE TRANSACTIONS AT THE PORTS OF BALBOA-PANAMA AND COLON CRISTOBAL FOR THE MONTH OF NOVEMBER, 1916.

Number of vessels inspected and passed.....	203
Number of vessels held in quarantine.....	16
Total number of vessels entered.....	219
Number of special inspections made to enforce compliance with antiplague and mosquito-breeding regulations.....	126
Number of vessels fumigated on arrival.....	20
Number of vessels fumigated on departure.....	1
Number of vessels detained but sailed in quarantine.....	8
Number of crew examined.....	11, 909
Number of stowaways examined.....	5
Number of passengers examined.....	4, 526
	16, 440
Number of supplementary examinations.....	3, 141
Number of persons vaccinated at port of arrival because of compulsory vaccination law.....	228
Number of persons vaccinated at port of departure.....	1, 283
	1, 511
Number of persons held in quarantine at the detention houses to complete period of incubation of yellow fever and plague.....	290
Number of persons held in quarantine on board vessels.....	1, 613
	1, 903
Total number of persons landed from foreign ports:	
Cabin.....	1, 970
Steerage.....	1, 650
	3, 620
Total number of persons embarked for foreign ports:	
Cabin.....	1, 517
Steerage.....	1, 511
	3, 028
Total number of persons arriving from coast towns.....	1, 620
